

Chemours' Thermal Oxidizer Destroying PFAS at Greater Than 99.99% Efficiency

FAYETTEVILLE, North Carolina, March 30, 2020 – The Chemours Company (Chemours) (NYSE: CC), a global chemistry company with leading market positions in titanium technologies, fluoroproducts and chemical solutions, has announced that testing of its Fayetteville Works thermal oxidizer has demonstrated a 99.99% PFAS destruction efficiency. Indeed, testing results show that the thermal oxidizer is controlling PFAS emissions at an average efficiency exceeding 99.999%. Testing was conducted by Chemours, and monitored by the North Carolina Division of Air Quality (NCDQAQ), in January and February 2020, following successful start-up of the thermal oxidizer in December of 2019.

“These results surpass the 99.99 percent destruction of PFAS air emissions as required in our consent order agreement with the state of North Carolina and Cape Fear River Watch, and further emphasize our ongoing determination to deliver on our commitments to our community, state and federal regulators and to ourselves. I’m extremely proud of our entire Chemours team—scientists, engineers, operators and mechanics, as well as our contract partners—as these dramatic results would not be possible without their tireless contributions” said Fayetteville Works Plant Manager Brian Long.

“As we have said previously, we hope our progress in emissions control provides a launching point for other PFAS manufacturers to make similar commitments, and demonstrate to our neighbors how seriously we take their concerns.”

The thermal oxidizer facility represents a \$100 million investment in emissions control technology, and positions the Fayetteville plant as a best-in-class manufacturing facility for air emission control. The Chemours Company continues working diligently with its own scientists, external experts, and local, state and federal officials on implementing additional longer-term solutions. The complete testing report for the thermal oxidizer is being submitted today to the NCDQAQ.

About The Chemours Company

The Chemours Company (NYSE: CC) helps create a colorful, capable and cleaner world through the power of chemistry. Chemours is a global leader in titanium technologies, fluoroproducts and chemical solutions, providing its customers with solutions in a wide range of industries with market-defining products, application expertise and chemistry-based innovations. Chemours ingredients are found in plastics and coatings, refrigeration and air conditioning, mining and oil refining operations and general industrial manufacturing. Our flagship products include prominent brands such as Teflon™, Ti-Pure™, Krytox™, Viton™, Opteon™, Freon™, and Nafion™. Chemours has approximately 8,000 employees across 35 manufacturing sites serving more than 5,000 customers in North America, Latin America, Asia-Pacific and Europe. Chemours is headquartered in Wilmington, Delaware and is listed on the NYSE under the symbol CC. For more information please visit chemours.com or follow Chemours on Twitter at @chemours.###
